CULTURE OF DAHLIAS

THE Dahlia is one of the easiest of all flowers to cultivate and will produce more flowers than any other plant grown, flowering all Summer and Fall if the simple cultural directions are followed closely. They can be grown in any good garden soil, but if possible plant in an open sunny situation. Prepare the soil thoroughly by digging 12 to 18 inches deep in the Fall, if possible, and again in the Spring. Plant any time between May 10th and June 15th, digging holes six inches deep and from three to four feet apart. Then lay in the tuber flat on its side, the size of which makes no difference as long as it has one strong eye or sprout. Cover three inches deep, thus leaving the hole one-half full, to be filled after plant comes up 6 to 8 inches above the ground. If plants are used which we prefer ourselves, plant as you would anything else.

As soon as the plant is large enough, cut out the top of it just above the second or third set of leaves, which causes the plant to grow a stout branch at the base of each of the four or six leaves left. Just as soon as the plants are up, the most important

thing to do is to keep the soil loose and mellow by hoeing or cultivating once or twice a week and just as soon after each rain as the soil will permit. As soon as the buds appear stop all cultivation and give the beds a mulch of rotted manure, leaves, etc. Water the beds and plants thoroughly once or twice a week and especially during the dry weather. Tie each plant to a strong stake so it may have a strong support. To have the greatest success is to keep them growing as strong and sturdy as possible. Never allow the faded flowers to remain on the plant but cut them off with as much stem or stalk as you can. To have larger blooms it is necessary to disbud, leaving the center bud and taking off the side ones, leaving a stem approximately eighteen inches long. Dahlias will continue to bloom until a heavy frost kills the tops in late Fall, after which the tops are cut off and the roots are dug and stored in a frost-proof cellar or basement, covering with dry soil, sand or anything that will keep them from shriveling. Divide in the Spring after the eyes begin to show.

DAHLIAS

These prices are for good strong divisions of roots or plants. We have a large stock of roots of nearly all kinds, with the exception of some of the newer varieties, which can only be supplied in growing plants. When the demands exceed the limit of roots or when preferred by the customer, we will furnish plants (which are preferred by many experienced growers) in the Spring at the proper time for planting.
